

Push-on Sockets for Photo Frame Stands

The Push-on Sockets fit over the edge of the backing board, without tools. Users move them to make the frame stand either way.

A01 v.5

Photo Frame Stands

**Photo Frame Stands for photo frames
up to 300mm / 12" tall**

In the workshop, a Push-on Socket is pushed onto an edge of the backing board. The board is dropped into the frame and a Stand pushed into the socket. It sits flat to facilitate packing and transit.

On receipt, the user lifts out the Stand, turns it through 90° and slides it back in. Users should never try to twist the Stand while in a Socket. To make the frame stand the other way, the Socket is moved around the backing board.

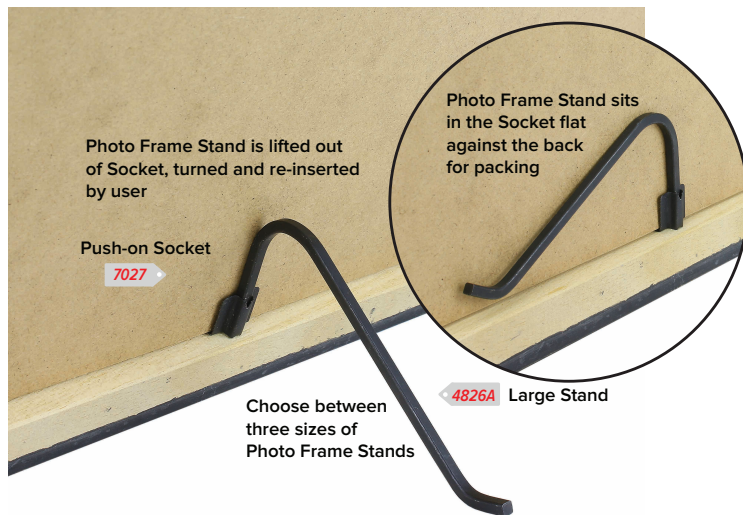

Photo Frame Stands come in three sizes and three shapes. Sockets and Stands are all available in three finishes.

Nothing could be simpler.

Photo Frame Stands

There are three sizes/shapes of Photo Frame Stands, each available in three finishes. All are made from 4mm square section steel wire which will never bend or corrode in normal use. Large and Gallery stands are of similar sizes but shaped slightly differentially to suit varying moulding profiles. Photo frame makers should order Trial Pack **9951** or Taster Pack **10706** to help select the best stand for each moulding profile.

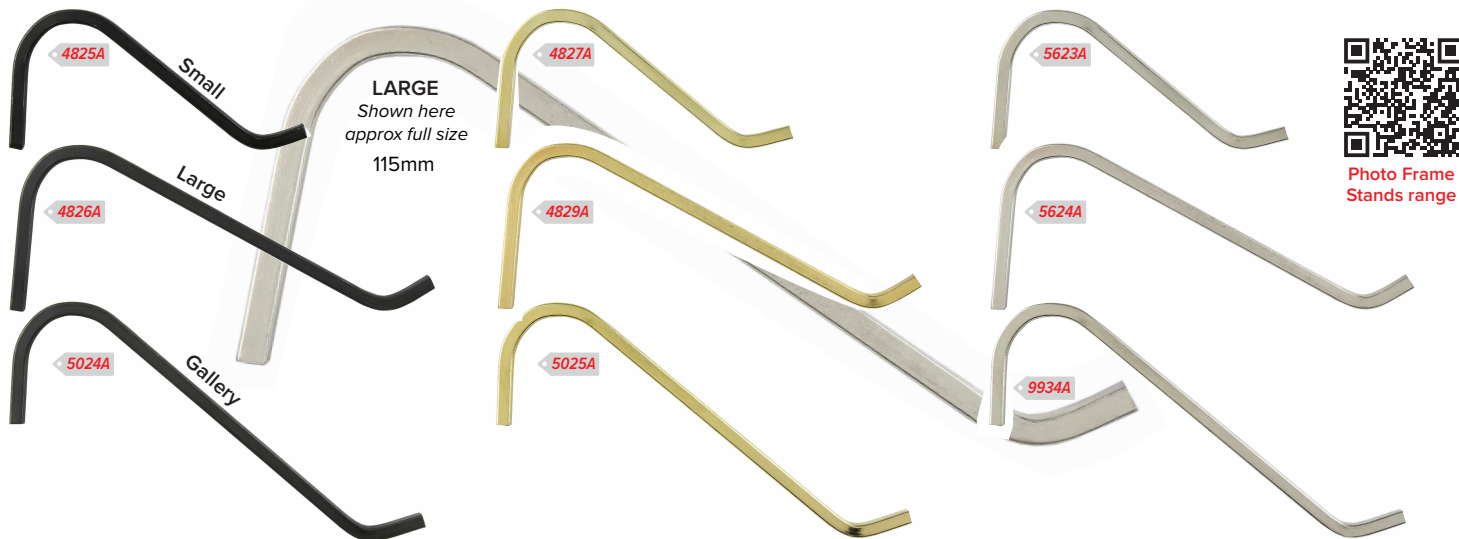

Photo Frame Stands SMALL 82mm / 3.2"

For frames up to around 200mm tall, with mouldings up to 30mm wide
